Seeds Of Deception: Exposing Industry And Government Lies About The Safety Of The Genetically Engineered Foods You're Eating

Synopsis

Without knowing it, Americans eat genetically modified (GM) food everyday. While the food and chemical industries claim that GMO food is safe, a considerable amount of evidence shows otherwise. In *Seeds of Deception*, Jeffrey Smith, a former executive with the leading independent laboratory testing for GM presence in foods, documents these serious health dangers and explains how corporate influence and government collusion have been used to cover them up. The stories Smith presents read like a mystery novel. Scientists are offered bribes or threatened; evidence is stolen; data withheld or distorted. Government scientists who complain are stripped of responsibilities or fired. The FDA even withheld information from congress after a GM food supplement killed nearly a hundred people and permanently disabled thousands. While Smith was employed by the laboratory he was not allowed to speak on the health dangers or the cover-up. No longer bound by this agreement, Smith now reveals what he knows in this groundbreaking exposé. Today, food companies sell GM foods that have not undergone safety studies. FDA scientists opposed this, but White House and industry pressure prevailed and the agency's final policy--co-authored by a former Monsanto attorney--denied the risks. The scientists' concerns were made public only after a lawsuit forced the agency to turn over internal documents. Dan Glickman, former Secretary of Agriculture, describes the government's pro-biotech mindset: "You felt like you were almost an alien, disloyal, by trying to present an open-minded view. . . . So I pretty much spouted the rhetoric. . . . It was written into my speeches." In *Seeds of Deception* Smith offers easy-to-understand descriptions of genetic engineering and explains why it can result in serious health problems. This well-documented, pivotal work will show you how to protect yourself and your family.

Book Information

Paperback: 289 pages

Publisher: Yes! Books (September 1, 2003)

Language: English

ISBN-10: 0972966587

ISBN-13: 978-0972966580

Customer Reviews

Having read a number of articles and books on genetically engineered foods, I found this book to be very comprehensive and very well written. I highly recommend it if you are interested in your health. As a biologist who has worked with DNA, and respect it, I place great value on Smith's easy to understand explanation on the genetic engineering process on DNA. Smith has also carefully researched FDA reports and quoted several people in his analysis of GMOs and their impact on society. With methodological precision, his research reveals the close ties of the U.S. government with biotechnology industry in several aspects of GMO production. Even more disturbing is the influence of biotechnology companies such as Monsanto, Novartis, Dow, and DuPont having on the government - they gave more than 3.5 million dollars (from 1995-2000) towards campaign contributions, with 3/4 going to Republicans. His research also reveals the impact of the genetically modified amino acid L-tryptophan in 1989-1990 that debilitated thousands of people with EMS, a disease that produces severe muscle pain, and even death. Forty people died from taking this L-tryptophan. This product was never labeled that it was genetically modified and the Japanese manufacturer - Showa Denko KK did not use the proper filtration level to remove the impurities. Subsequent from these health risks, the product was removed from shelves. My favorite quotes from this book came from George Wald, Nobel Laureate in Medicine. He said for genetic engineering - "The results will be essentially new organisms, self-perpetuating and hence permanent. Once created, they cannot be recalled" and "Up to now, living organisms have evolved very slowly and new forms have had plenty of time to settle in."
